

Flow Computer Configuration - Functional Description

Document No.:	LIB-INS-0044
Revision:	C
Discipline:	Instrumentation
Document Type:	Specification
Date:	2026-07-10
Project:	FPSO Liberty Development

Description

This document describes the functional configuration of the custody transfer flow computer, including input signal mapping, API 21.1 flow correction parameters, and alarm setpoints.

Configuration changes to any custody transfer calculation shall be witnessed and signed off by both the Company and Client metering representatives before being committed to the production configuration.
